

Lightning Grease Lubricant

DESCRIPTION

Lightning Grease (a jelled version of Tufoil) works where all others fail. Field tests show that Lightning Grease extends the life of crucial machine parts.

Lightning Grease significantly lowers operating temperatures, thereby extending machinery and bearing life. This easily-sheared grease is great for applications where low break-out torque, low temperature, stick slip and wear are required.

TYPICAL APPLICATIONS

Use Lightning Grease on:

- fine bearings
- gears
- steppers
- servo bearings
- robots

TYPICAL PROPERTIES

Lightning Grease is a brownish, semi-solid grease.

Lightning Grease is available in:

- 125 grams
- 1/4 lb.
- 1/2 lb.
- 1 lb.

APPLICATION DETAILS

Apply as you would any grease. Lightning Grease is also great for old machines. Put a drop on the surface, work the mechanism and wipe off the excess with a clean tissue. Repeat until the tissue is no longer discolored by dirt and metal debris left by the old lubricant. With just a dab on all the surfaces and old sticky gear boxes, bearings and mechanisms are brought back to life.

STORAGE/SHIPPING/HANDLING

No special handling required.

HEALTH & SAFETY

Lightning Grease is a very safe product. Wash hands after use. Keep product out of eyes.
